Memo to Stout about access to mine and perimeter air sampling at Export Plant.

MEMORANDUM

August 29, 2000

SUBJECT: Respirators to be worn when on mine site and performing perimeter air monitoring at Export Plant

FROM: Jude Hobza

TO: Jim Stout

As per discussions with Paul Peronard and Duc Nguyen, all personnel entering and visiting the vermiculite mine shall don respirators. This requirement also pertains to all personnel and visitors associated with any activities being performed by contractors or representatives of the United States Environmental Protection Agency.

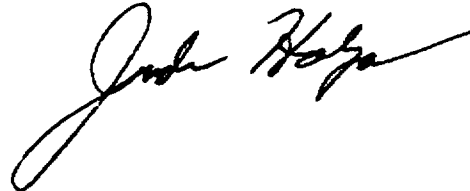

Perimeter air monitoring at the Export Plant shall be performed as per the:

- Unilateral Administrative Order for Removal Activities; Docket Number CERCLA -8-2000-10, with the exception of the MIE DataRAM Portable Real Time Aerosol Monitors as per discussions with Paul Peronard;
- The Approved Work Plan for the Removal of Asbestos and Vermiculite at the Libby Asbestos Site prepared for W.R. Grace & Co.

Four additional air samples shall be collected around the perimeter of the Planer Building located at the Export Plant. These air samples shall be collected while field operations are taking place in the Planer Building and while the Burnett's are operating their business on the site. The analysis of these samples shall be performed by using transmission electron microscopy (TEM) and in accordance with the specifications as outlined in the Unilateral Administrative Order for Removal Activities; Docket Number CERCLA -8-2000-10.

cc: Paul Peronard, On-Scene Coordinator; 8EPR-ER
Duc Nguyen, On-Scene Coordinator; 8EPR-ER
Chris Weis, 8EPR-PS
